Dear Karl,

please find attached the bunker analysis report of the SOFIA EXPRESS, purchase order no. 4504078460.

According to the bunker delivery receipt, the density was 983,0 kg/m³ whereas the analyzed density is just 978,00 kg/m³. This difference results in a short delivery of 13.759 mt, which we, Hapag-Lloyd, claim as per our purchase order agreement.

USD 492,00 x 13,759 mt = USD 6.769,43

You may conduct a counter analysis in an independent major laboratory on basis ISO method, taking one of the double sealed and countersigned samples as described in the attached survey report. The costs for counter analysis are for Seller's account. The laboratory must provide readable pictures of the sample bottle before and after seal-breaking.

Best regards,

Dorit Niemeyer
